Director, NTA

Important Instructions

- The NTA Score of a candidate indicates the percentage of candidates who have scored EQUAL TO OR BELOW (same or lower raw marks) that candidate in that session.
- The NTA scores of a Candidate have been calculated as follows:
 $100 \times \frac{\text{Number of candidates appeared in the 'Session' with raw score EQUAL TO OR LESS than the candidate}}{\text{Total number of the candidates appeared in the 'Session'}}$
- NTA score is not the same as percentage of marks obtained.
- A National Merit Ranking (All India Rank) has been arrived on the basis of NTA Score.
- Candidates having same Score shall be listed in a chronological (ascending) order as per their date of birth.
- Candidates having same score would be given the same Merit, and the Merit number would be increased by the same number i.e. if there are two candidates at Merit 2, Merit 3 would not be awarded to the next candidate but Merit 4 would be given.
- The admission authorities are advised to use score awarded to the students for allotment of seat in the AICTE approved programs along with the other criteria that may exist, as applicable.
- Candidate's particulars including Category and Person with benchmark Disability (PwBD) have been indicated as mentioned by the candidate in the online application form.
- Instances of incorrect information provided by the candidates, if detected at any stage, would make the candidate liable for disqualification.

Annual Placement Report

A.Y:2022-2023

The Geethanjali College of Pharmacy's Training and Placement Cell is an important component. The management is very helpful in providing all of the services required to keep the Cell running. The Placement Cell had another successful year of placements and internships, with several regular and new companies visiting campus for the recruitment drive. Students are also interviewed outside of campus. Campus Recruitment & Training and Personality Development Programme are aimed at exposing college students to the company's international trends and developing their mindset. Aside from honing their reasoning and analytical abilities, they are taught soft skills and workplace ethics. Students are educated on General Aptitude, which includes quantitative analysis, organizational discussion, interview techniques, and resume writing, which gives interviewees confidence before the employer. The Cell organizes industry visits, training, and internships. We intend to invite companies from various fields in order to provide students from all courses with a variety of opportunities. The Cell operates with the clear goal of ensuring a better placement record and higher attainment for the organization's scholars.

Students are placed in various companies for the academic year 2022-23, including Medplus, Strathspey labs pvt ltd, Episource India pvt ltd, Salvo industries ltd, Healius Pathology, Doctus software solutions pvt ltd and Sutherland.

Abstract

Empagliflozin is an inhibitor of sodium-glucose co-transporter-2 (SGLT2). It is used in the management and treatment of diabetes mellitus (type 2). Till now the research done suggests that nano delivery systems may be the choice of drug delivery which can reduce dosing frequency and improve patient compliance. Hence, it was proposed to prepare nanoparticles of Empagliflozin. In this work, it was attempted to prepare nanoparticles of Empagliflozin using Eudragit and HPMC as polymers by solvent evaporation technique. Among the formulations, F1 and F4 have exhibited the best results. Drug loading capacity was between 13.20 to 19.96 percent. Encapsulation efficiency (%) of drug-polymer containing nanoparticles in various ratios was in-between 68.38 to 95.82. It is increased as the polymer quantity increased. For 10 hours, *in vitro* dissolution testing showed the drug release percentage for all formulations in the range between 89.75 and 97.93 per cent. *In vitro* studies have concluded that nanoparticles of Eudragit are superior for Empagliflozin delivery than HPMC based nanoparticles. The polymeric nano particles were evaluated for anti-diabetic Activity. All the formulations showed optimum results of which formulation containing higher concentration of Eudragit shown the better results in all the evaluated parameters. The polymeric nano

particles were evaluated by *in-vitro* and *in-vivo* anti-diabetic methods and shown potential anti-diabetic activity. Thus, F1 can be concluded as the ideal batch of formulation.

Keywords: Polymeric nanoparticles, Empagliflozin, Eudragit, HPMC, Ethyl cellulose

Introduction:

In Diabetes Type 2 (T2D) known as adult-onset diabetes is a type of diabetes marked by high blood sugar levels, insulin resistance, and a shortage of insulin. Non-insulin hypoglycemic medications (non-insulin hypoglycemic agents) are routinely used to treat hyperglycaemia in people with type 2 diabetes. Because type-2 diabetes has several flaws, choosing medicines with complimentary modes of action is another sensible way to improve results. The current treatment of T2DM has the disadvantages such as lower bioavailability, less efficacy and the instant drug release, which leads to higher doses and dosing frequency. Till now the research done suggests that nano delivery systems may be the choice of drug delivery which can reduce dosing frequency and improve patient compliance [1]. Diabetes has a multifactorial pathological nature. Hence, multi-target drugs and personalized medicine may be considered as promising approaches [2].

Formulation and invitro evaluation of captopril floating microspheres

Pallam Naga Chandrika, Tathode Bhagya Sri, Silveri Pallavi, Zoha Sultana

Department of Pharmaceutics, Geethanjali College of Pharmacy, Cheeryal, Keesara, Telangana

Received: 10-08-2022 / Revised Accepted: 02-09-2022 / Published: 05-09-2022

ABSTRACT

Captopril is an ACE inhibitor used for the management of essential or renovascular hypertension. The present work is formulation of captopril floating microspheres by using xanthan gum, guar gum and karaya gum. All the formulations were subjected for preformulation evaluation. Results of preformulation studies, FTIR, SEM, particle size and size distribution, % yield, drug content, buoyancy time, entrapment efficiency, in vitro dissolution and release kinetics. The FTIR Spectra revealed that, there was no interaction between polymers and Captopril. On the basis of release data of Captopril formulation F6 showed a good controlled release profile with maximum entrapment efficiency because of optimum drug polymer concentration i.e., 1:1:1 ratio (guar gum+ xanthum gum) with sodium alginate than other drug: polymer ratios. The invitro dissolution data for best formulation F6 were fitted in different kinetic models i.e, zero order, first order, Higuchi and korsmeyerpeppas equation. Optimized formulation F6 shows zero order drug release with Super case II transport mechanism.

Keywords: Captopril; ACE Inhibitor; Renovascular Hypertension

INTRODUCTION

The new method is called novel medication delivery systems. Recent developments in the knowledge of drug pharmacokinetic and pharmacodynamic behaviour provide a more logical approach to the creation of an ideal drug delivery system. These carriers, known as new drug delivery systems (NDDS), keep the drug concentration in the therapeutic range for a longer period of time. Novel drug delivery systems have a number of advantages over traditional drug delivery.

1. Optimum therapeutic- drug concentration in the blood or in tissue may be

maintained over a prolonged period of time.

2. Pre- determined release rates of extended period of time may be achieved.
3. Duration for short half- life drug may be increased
4. By targeting the site of action, side effects may be eliminated.
5. Frequent dosing and wastage of the drug may be reduced or excluded.
6. Better patient compliance may be ensured.¹

DEVELOPMENT AND VALIDATION OF RP- UPLC METHOD FOR SIMULTANEOUS DETERMINATION OF LAMIVUDINE AND DOLUTEGRAVIR IN COMBINED DOSAGE FORM**Madhireddy Srija Reddy, Dr. N. Anjaneyulu, Dr R.Naga Kishore**Department Of Pharmaceutical Analysis, Geethanjali College Of Pharmacy,
Cheryal (V) Keesara (M) , Medchal DIST ,Telangana,500092**Abstract:**

A simple, accurate, precise method was developed for the simultaneous estimation of the Lamivudine and Dolutegravir in pharmaceutical dosage form by RP-UPLC. Chromatogram was run through HSS C18 (2.8 x 50 mm x 1.6 μm). Mobile phase containing Buffer Na₂HPO₄. Methanol taken in the ratio 70:30 was pumped through column at a flow rate of 0.3 mL/min. Buffer used in this method was Potassium dihydrogen phosphate. Temperature was maintained at 30°C. Optimized wavelength selected was 260 nm. Retention time of Lamivudine and Dolutegravir were found to be 1.408 min and 1.739 min. The percentage RSD of the Lamivudine and Dolutegravir were and found to be 0.8 and 0.8 respectively. The percentage recovery was obtained as 100.39% and 100.37% for Lamivudine and Dolutegravir respectively. LOD, LOQ values obtained from regression equations of Lamivudine and Dolutegravir were 0.41, 1.25 and 0.09, 0.26 respectively. Retention times were decreased and the run time was decreased, so the developed method was simple, economical and effective for the routine quality control test in industries.

DEVELOPMENT AND VALIDATION OF A RP - HPLC METHOD FOR THE SIMULTANEOUS DETERMINATION OF BEMPEDOIC ACID & EZETIMIBE IN PURE AND PHARMACEUTICAL DOSAGE FORM

Azmera Tejaswi, M. Satish Kumar, Dr. N. Anjaneyulu

Department of Pharmaceuticals Analysis, Geethanjali College of Pharmacy, Cheeryal.

Abstract:

Analytical Method Development and Validation for Bempedoic acid and Ezetimibe in bulk and Combined Dosage Form by RP-HPLC. Include Stability Indicating RP-HPLC Method Development and Validation for Simultaneous Estimation of Bempedoic acid and Ezetimibe in Bulk and their Pharmaceutical dosage form, Using Waters alliance HPLC system, Quaternary gradient pump of e2695 series equipped with an auto sampler injector with 10µl is injected eluted with the mobile phase containing HSA and Acetonitrile in the ratio of 30:70 v/v which is pumped at a flow rate of 1ml/min and detected by UV detector at 225nm. The peak of Bempedoic acid and Ezetimibe was eluted at retention times of 3.246 min and 3.865 min respectively. In this proposed HPLC method for the selected drugs showed good linearity. Results for the recoveries of selected drugs were found to be within limits (98 – 102 %). These indicate that the proposed method was accurate for the analysis.

METHOD DEVELOPMENT AND VALIDATION FOR THE QUANTITATIVE ESTIMATION OF UMECLIDINIUM AND VILANTEROL IN PURE FORM AND MARKETED PHARMACEUTICAL DOSAGE FORM BY RP-HPLC

Ankita Tiwari, Dr. N.Anjaneyulu, Dr R.Naga Kishore

Geethanjali College of Pharmacy, Cheeryal(v), keesara(M), Medchal Dist.500092

Abstract:

A new, simple, precise, rapid, selective and stability reversed-phase high performance liquid chromatography (RP-HPLC) method has been developed and validated for the simultaneous quantification of Vilanterol and Umeclidinium in pure form and its pharmaceutical dosage form. The method is based on Phenomenex Gemini C18 (4.6 × 250mm) 5μ column. The separation is achieved using isocratic elution by Methanol: TEA Buffer in the ratio of 65:35% v/v, pumped at flow rate 1.0mL/min and UV detection at 265nm. The column is maintained at 40°C throughout the analysis. The total run time is about 6min. The method is validated for specificity, accuracy, precision and linearity, robustness and ruggedness, system suitability, limit of detection and limit of quantitation as per international conference of harmonization (ICH) Guidelines. The method is accurate and linear for quantification of Vilanterol, Umeclidinium between 10 - 50μg/mL and 20 - 100μg/mL respectively. Further, satisfactory results are also established in terms of mean percent- age recovery (100.37% for Vilanterol and 100.34% for Umeclidinium, intra-day and inter-day precision (<2%) and robustness. The advantages of this method are good resolution with sharper peaks and sufficient precision. The results indicate that the method is suitable for the routine quality control testing of marketed tablet formulations

An Overview of the G20 Countries and India's Patent System

K Mounika^{1*}, S D Shalini¹, A Srinivasreddy¹, R K SreeLakshmi¹, C H Manasa¹, M Nikhila¹

Abstract: Patents are standards that are utilised to grow innovative knowledge since they represent the generation of that information. Prior research focused examined the advantages of patents, whereas current research focuses on standards and economic growth in the short term across G20 countries. The long-term consequences of formal standards and patents on economic growth in a panel of G 20 countries are being examined for the first time in this study. In order to promote technical and economic growth, the patent system ensures that information about new innovations is made available for eventual public use. The codified G20 countries' patent rules contain procedural provisions for the patent registration in India using standard forms. Three types of patents integrated as may eligible of invention for kind of patent protection with codify their standards as information includes all the significant technical features of our invention useful for a public search on specific fields of application.

INTRODUCTION

A patent is an exclusive right granted for an invention, which is a product or a process that provides, in general, a new way of doing something, or offers a new technical solution to a problem. [1] To get a patent, technical information about the invention must be disclosed to the public in a patent application. [2] In principle, the patent owner has the exclusive right to prevent or stop others from commercially exploiting the patented invention. In other words, patent protection means that the invention cannot be commercially made, used, distributed, imported, or sold by others without the patent owner's consent. [3] Patents are territorial rights. In general, the exclusive rights are only applicable in the country or region in which a patent has been filed and granted, in accordance with the law of that country or region. [4] The protection is granted for a limited period, generally 20 years from the filing date of the application. A patent is the granting of a property right by a sovereign authority to an inventor. This grant provides the inventor exclusive rights to the patented process, design, or invention for a designated period in exchange for a comprehensive disclosure of the invention. They are a form of incorporeal right. Government agencies typically handle and approve applications for patents. In the United States, the U.S. Patent and Trademark Office (USPTO), which is part of the Department of Commerce, handles applications and grants approvals.

PATENT SYSTEM OF INDIA

Intellectual Property Rights (IPR)

Once granted, intellectual property rights are statutory protections that allow owners to stop others from using their creations for commercial purposes for a specified amount of time. [5]

Governing Laws in India for IPR [5-7]

Table 1 was history of patent acts in India.

A utility patent is given to someone who creates something new, finds something, or makes small but beneficial changes to an already existing product, process, machine, or manufacturing unit. A minor patent, a little patent, an innovation patent, etc. are some other names for it. Unfortunately, only a few nations' worldwide China, Brazil, Japan, Italy, the United Arab Emirates, etc. offer utility patents; India is not one of them. The United States Patent and Trademark Office (USPTO) will grant a utility patent as one of the categories of patents to each inventor in this stream. The patent office will grant an invention a patent after evaluating its plausibility and determining whether an equivalent invention already exists. A utility patent is a patent granted to the inventor who uses it to exercise the exclusive right over his or her creation by prohibiting others from creating, selling, or engaging in other commercial activities for a set amount of time without his or her consent. When a utility patent is secured, both the invention's overall design and its different features are safeguarded. Like this, even if it appears different, the innovation shall not exist in any purported or copied form. [8]

1. Utility Patent Features

A utility patent is a type of patent that protects the development of new, improved and practical machines, processes or products. A utility patent, also called an "innovation patent," forbids anyone from producing, using, or offering the invention for sale without permission. Most people usually mean utility patents when they talk about patents. The utility model grants an unqualified right to innovation about the products, not the processes. A minor innovation, sometimes known as an "incremental invention," is one that is made from an already existing one and is suitable for a utility patent. The requirements for uniqueness are needed here; however, they vary by nation. In general, a patent will provide protection for 20 years, while a utility patent will provide protection for a shorter period and will vary from nation to nation. For instance, Japan offers insurance for 10 years, whereas France only offers protection for 6 years. Therefore, the typical utility patent term of protection will be between 6 and 15 years. In comparison to other patents, the utility model registration process takes less time. Prior to registration, there will be no extensive review process in place; only the

ABSTRACT

HPLC is an one of the most important analytical equipment used for many quantitative and qualitative analysis purpose in pharmaceuticals and biological products, it works on adsorption principle in which solid or stationary phase and liquid or mobile phase are involved in order to separate mixture of components into individual components this equipment is used in various purification, isolation, forensic science, research and development. Various types of samples are passed on to the stationary phase through mobile phase based on adhesive and cohesive interactions between sample to sample, sample to mobile phase, sample to stationary phase are held, due to these interactions elution power and retention time(Rt) of isolated components from mixture of components. HPLC has been used in various TDM analyses also due to its high accuracy, efficiency. HPLC have sophisticated instrumental setup in which high pressure mobile phase and sample mixture is passed through stationary phase (column) ,now this pressured eluents through column can exposed to detector by spectroscopy method, since HPLC is an combination of chromatography and spectroscopy

INTRODUCTION

High performance liquid chromatography or high pressure liquid chromatography is a specific column chromatography equipment in this column is made into stationary phase by packing suitable solid material like silica-G, amylose, cellulose¹. HPLC consist of two main components which are mobile phase, column by using this two components chromatography analysis is performed in various biochemistry and pharmaceuticals department². pump is used to pressured flow of mobile phase on column, HPLC have various capacities in order to withstand back pressure. Analytic nature plays an important role since it shows chemical and physical interaction with stationary phase (column) and mobile phase (3). Analyte solubility in the mobile phase is important as polar solutes are soluble in polar solvents, polarity and nonpolarity of the sample decides the mobile phase and also type of HPLC for analysis (4). The sample to be analyzed is introduced in small volume to the stream of mobile phase and is retarded by specific chemical or physical interactions with the stationary phase(2,4). the amount of retardation depends on nature of analyte and composition of mobile phase and column since either it show more interaction with column then elution time is more,

retardation is also more due to interaction of sample and column (5), when interaction between mobile phase and sample is more sample elution is very speed, retardation factor is less (5). The time at which specific sample elutes are known as retention time. Common mobile phase solvents used in the hplc are based on the polarity chart, solvents are taken in combination or isolated form based on physicochemical properties of analyte (6). This mobile phase is run either through gradient program or isocratic program in order produce desired separation or purification of sample or analyte(5,6). HPLC run time also place important role for complex mixture of samples like phytochemicals, xanthophylls, each sample Rt value is specific to each method (7), Rt value difference between sample composition peak important for preparative or collection chromatography to quantify the each components in a sample(6, 8).

Types of HPLC

HPLC operation can be defined into various types based on their analyte chemical profile like polarity nature, molecular weight¹¹.

A Prospective Comparative Study on the Efficacy of Chlorzoxazone, Ibuprofen and Paracetamol versus Thiocolchicoside, Aceclofenac and Paracetamol in Patients with Acute Lower Backache: A Tertiary Care Hospital

Athyaia Divya¹, Balaraju Ramya¹, Muddapuram Manasa¹, Varsha Madas¹, Karthik², R Naga Kishore^{1*}

Abstract: The combination of CNS acting muscle relaxants, non-steroidal medicine medication and paracetamol are normally prescribed in the management of mechanical low backache. To compare the effectiveness of combination drugs chlorzoxazone, ibuprofen and paracetamol versus thiocolchicoside, aceclofenac and paracetamol in subjects having low backache. A total of one hundred patients between ages vary from eighteen and sixty years having acute lower backache of ≤ 7 days length were categorized as groups. Group A type was prescribed with thiocolchicoside, paracetamol and aceclofenac whereas Group B type was prescribed with chlorzoxazone, aceclofenac and paracetamol orally doubly daily for seven days. The pain assessment, calculated by VAS and ODI. Readings were recorded on day one (baseline) and day seven. A significant pain reduction occurred on day seven in two groups. It was observed statistically that relief in pain varied in 2 groups, however clinically Group-B subjects shown better efficacy compared to Group-A. These findings confirm that chlorzoxazone, paracetamol, ibuprofen is a preferable combination for patients having low backache.

INTRODUCTION

Low back pain (LBP) is a considerable health problem in all developed countries and is most commonly treated in primary healthcare settings. It is usually defined as pain, muscle tension, or stiffness localized below the costal margin and above the inferior gluteal folds, with or without leg pain (sciatica). The most important symptoms of non-specific low back pain are pain and disability. The diagnostic and therapeutic management of patients with low back pain has long been characterized by considerable variation within and between countries among general practitioners, medical specialists and other healthcare professionals. [1, 2] It is a major health and socio-economic problem [3] and is associated with high costs of health care, work absenteeism and disablement. [4] In general, LBP is managed with the short-term use of non-steroidal anti-inflammatory drugs (NSAIDs) and centrally acting skeletal muscle relaxants. [5] Unfortunately, NSAIDs have gastric intolerance, whereas most of the centrally acting muscle relaxants have central nervous system depressant Side-effects such as sedation, dizziness, impairment of coordination, mental confusion, weakness, etc. [6] Hence, these limiting factors demand a need for an ideal fixed-dose combination (FDC) which is devoid of effects on psychomotor performance, free of sedation and higher tolerability.

The visual analog scale (VAS) is a valid and reliable measure of chronic pain intensity. However, little work has been done to assess the reliability of the VAS for the measurement of acute pain. The few studies that have explicitly assessed the reproducibility of VAS measures of

pain focused on chronic or postoperative pain and most examined the correlation between repeat VAS measures. [7] A study of a mechanical version of a VAS (a tool with a 10-cm ruler and a marker that the patient moves to the point indicating his or her intensity of pain) used by patients with pain found a correlation of 0.88 between two measures taken two hours apart. Studies that examined the correlation between a vertically oriented VAS for pain with a horizontally oriented VAS found correlations of 0.99 and 0.91 when they were given within 10 minutes of each other to patients with a variety of pain. [7, 8]

The Oswestry Disability Index (ODI) is the most commonly used outcome-measure questionnaire for low back pain in a hospital setting. It is a self-administered questionnaire divided into ten sections designed to assess the limitations of various activities of daily living. Each section is scored on a 0-5 scale, with 5 representing the greatest disability. The index is calculated by dividing the summed score by the total possible score, which is then multiplied by 100 and expressed as a percentage. Thus, for every question not answered, the denominator is reduced by 5. If a patient marks more than one statement in a question, the highest-scoring statement is recorded as a true indication of disability. The questionnaire takes 3.5-5 min to complete and approximately 1 min to score. [5, 10]

Chlorzoxazone, a central muscle relaxant acts primarily at the level of the spinal cord and subcortical areas of the brain, where it inhibits multisynaptic reflex arcs involved in producing and maintaining skeletal muscle spasms. The exact mode of action is not clear, may be related to the sedative properties of the drug. The side-effect profile is similar to that of most other muscle relaxants, except for a limited number of reported cases of significant hepatotoxicity particularly by chlorzoxazone. [11]

Thiocolchicoside is a semi-synthetic derivative of colchicines, a natural glycoside that originated from flower seeds of superb gloriosa. [12] It has an affinity for the inhibitory glycine and gamma-aminobutyric acid (GABA)-A

ABSTRACT

Objective: A New method was established for simultaneous estimation of Emtricitabine and Tenofovir disoproxil fumarate by RP-HPLC method. **Methods:** The chromatographic conditions had been effectively advanced for the separation of Emtricitabine and tenofovir by way of using Edurasil ODS-3 C18(4.6 x 50mm, 3.5µm) column, go with the flow charge changed into 1ml/min, cellular segment ratio become Phosphate buffer (0.05M) pH four.6: ACN (30: 70) (pH become adjusted with orthophosphoric acid), detection wave period was 250nm. The device used turned into WATERS HPLC Auto Sampler, Separation module 2695, PDA Detector 996, Empower-software model-2. **Results:** Retention time of Emtricitabine and tenofovir were found to be 0.919 min and 1.732 min. The % purity of Emtricitabine and tenofovir was found to be 99.7 % and 99.04 % respectively. The system suitability parameters for Emtricitabine and tenofovir such as theoretical plates and tailing factor were found to be 1.56, 2744.20 and 1.19, 33.75.11. The linearity study for Emtricitabine and tenofovir was found in concentration range of 20µg-100µg and 30µg-150µg and correlation coefficient (r2) was found to be 0.999 and 0.999 % RSD for intermediate precision was 0.6 and 0.69 respectively. The precision study was precise, robust and repeatable. LOD value was 2.98 and 2.96, and LOQ value was 9.98 and 9.96 respectively. **Conclusion:** The results of study showed that the proposed RP-HPLC method is a simple, accurate, precise, rugged, robust, fast and reproducible, which may be useful for the routine estimation of Emtricitabine and Tenofovir disoproxil fumarate in pharmaceutical dosage form.

KEYWORDS: Emtricitabine, Tenofovir disoproxil fumarate, RP-HPLC.

INTRODUCTION

Emtricitabine is a nucleoside reverse transcriptase inhibitor (NRTI) indicated for the treatment of HIV infection in adults or combined with tenofovir alafenamide for the prevention of HIV-1 infection in high-risk adolescents and adults.^[1] Emtricitabine is a cytidine analogue.^[2] The drug works by inhibiting HIV reverse transcriptase, preventing transcription of HIV RNA to DNA. IUPAC Name: 4-amino-5-fluoro-1-[(2R,5S)-2-(hydroxymethyl)-1,3-oxathiolan-5-yl]-1,2-dihydropyrimidin-2-one. Chemical Formula is C₈H₁₀FN₃O₃S. Molecular Weight is 247.247 g·mol⁻¹. Emtricitabine is a white to off-white powder with a solubility of approximately 112 mg/mL in water at 25°C. The log P for emtricitabine is -0.43 and the pKa is 2.65.

name *Viread*. belongs to a class of antiretroviral drugs known as nucleotide analogue reverse transcriptase inhibitors (nRTIs).^[3] This drug is prescribed in combination with other drugs for the management of HIV infection as well as for Hepatitis B therapy. Tenofovir belongs to a class of antiretroviral drugs known as nucleotide analog reverse transcriptase inhibitors (NtRTIs), which block reverse transcriptase, an enzyme necessary for viral production in HIV-infected individuals.^[4] This enables the management of HIV viral load through decreased viral replication. IUPAC Name (2E)-but-2-enedioic acid; bis(((propan-2-yl)oxy) carbonyl)oxy) methyl) (((2R)-1-(6-amino-9H-purin-9-yl)propan-2-yl)oxy) methanephosphonate. Chemical Formula is C₂₃H₃₄N₅O₁₄P. Molecular Weight is 535.1 g·mol⁻¹.

Tenofovir disoproxil fumarate (a prodrug of tenofovir) marketed by Gilead Sciences, under the trade name *Viread*.

ABSTRACT

Leukorrhea is a yellowish, whitish, or greenish discharge through the female vaginal opening which may be usual or a marker of infection. In women, leukorrhea is a prevalent problem, especially in India which shouldn't be neglected. Leukorrhea is usually treated with fluoroquinolones and cephalosporin antibiotics. The initial objective of the study is to compare the efficacy of drugs ciprofloxacin and cefixime in patients with Leukorrhea. To determine which drug is more effective in a certain period to relieve the patient condition before laboratory investigations done. In this study, the efficacy on Ciprofloxacin v/s cefixime in patients with leukorrhea in gynecology OPD, a total of 100 samples was taken into consideration out of which 50 prescriptions consisting of ciprofloxacin and 50 prescriptions consisting of cefixime. It was observed statistically that relief of symptoms varied in 2 groups, however clinically Group-A subjects(ciprofloxacin) showed better efficacy compared to Group B (cefixime). These findings confirm that the ciprofloxacin is preferable for patients having leukorrhea (Whitedischarge).

Keywords: Antibiotics, Leukorrhea, gynecological problem, white discharge, leukorrhea symptomsassessment questionnaire, OPD of gynecology.

INTRODUCTION

Vaginal discharge is generally creamy and yellow-coloured discharge is referred to as leukorrhea. The vaginal discharge drains out microbes and cell debris through the vagina, keeping it clean and infection-free⁴⁻⁶ of cases. Physiological leukorrhea is a normal episode of white vaginal discharge. ⁴⁻⁶ If the appearance, consistency, thickness, or odor of the discharge varies from common, leukorrhea might become abnormal. Antibacterial and antifungal medications are given to treat leukorrhea infections. Yeast infections are treated with vaginal gels and creams. Treatments are usually grounded on the fundamental source and require an expert diagnosis from a gynecologist before being implemented.

Antibacterial such as fluoroquinolones, clindamycin, cephalosporins, tetracyclines, and nitrofurantoin are given to treat leukorrhea. Since most treatment options have antibiotic resistance and less efficacy in cases of lower abdominal infections, we chose to compare the 2 different classes of antibiotic efficacy that are readily available. Here Ciprofloxacin and cefixime are currently being compared in respect of efficacy among those classes.

MATERIALS AND METHODS

STUDY DESIGN: The study was designed to be a prospective, observational, in comparing the efficacy of ciprofloxacin v/s cefixime in patients with leukorrhea. A

Annual Placement Report

A.Y:2022-2023

The Geethanjali College of Pharmacy's Training and Placement Cell is an important component. The management is very helpful in providing all of the services required to keep the Cell running. The Placement Cell had another successful year of placements and internships, with several regular and new companies visiting campus for the recruitment drive. Students are also interviewed outside of campus. Campus Recruitment & Training and Personality Development Programme are aimed at exposing college students to the company's international trends and developing their mindset. Aside from honing their reasoning and analytical abilities, they are taught soft skills and workplace ethics. Students are educated on General Aptitude, which includes quantitative analysis, organizational discussion, interview techniques, and resume writing, which gives interviewees confidence before the employer. The Cell organizes industry visits, training, and internships. We intend to invite companies from various fields in order to provide students from all courses with a variety of opportunities. The Cell operates with the clear goal of ensuring a better placement record and higher attainment for the organization's scholars.

Students are placed in various companies for the academic year 2022-23, including Medplus, Strathspey labs pvt ltd, Episource India pvt ltd, Salvo industries ltd, Healius Pathology, Doctus software solutions pvt ltd and Sutherland.

Geethanjali College of Pharmacy

Approved by AICTE, PCI New Delhi, Permanently Affiliated to JNTUH

Accredited by NBA (B. Pharmacy) & Accredited by NAAC (A+)

Recognized Under UGC Section 2F & 12B of UGC Act, 1956, by DSIR-SIRO & HI/BI of MSME,

Certified by ISO 9001:2015, AMC of PvPi, NIRF

Cheeryal (V), Keesara (M), Medchal-Malkajgiri Dist., Telangana State- 501301

Consolidated Report

B. Pharm II Year, II Sem:

S.No	Name Of The Subject	Total No.Of Students	Mid I Slow Learners List	Mid II Slow Learners List	Passed Students List
1	PHARMACEUTICAL ORGANIC CHEMISTRY - III	102	40	41	80
2	MEDICINAL CHEMISTRY - I	102	22	26	81
3	PHYSICAL PHARMACEUTICS - II	102	15	15	79
4	PHARMACOLOGY - I	102	10	10	79
5	PHARMACOGNOSY AND PHYTOCHEMISTRY - I	102	10	10	93

Geethanjali College of Pharmacy

Approved by AICTE, PCI New Delhi, Permanently Affiliated to JNTUH

Accredited by NBA (B. Pharmacy) & Accredited by NAAC (A+)

Recognized Under UGC Section 2F & 12B of UGC Act, 1956, by DSIR-SIRO & HI/BI of MSME.

Certified by ISO 9001:2015, AMC of PvPi, NIRF

Cheeryal (V), Keesara (M), Medchal-Malkajgiri Dist., Telangana State- 501301
