9.4 The obligations under this Clause shall survive expiry or termination of this Agreement.

10. INTELLECTUAL PROPERTY RIGHTS

10.1 Company hereby reserves/retains all of its right, title, and interest in all its copyrights, patents, trademarks, service marks, design rights (whether registered or unregistered), trade secrets, know-how, expertise, and all other similar proprietary rights associated therewith ("**Intellectual Property Rights**") and/or which are developed in connection with this Agreement, or already developed.

10.2 Service Provider acknowledges that while providing the Services, Service Provider may use the pre-existing intellectual property including without limitation the materials, tools, concepts, methodologies, processes, practices and know-how of the Company, which will remain the property of the Company. The Parties agree that in the event of any development of intellectual property by the Service Provider at the request of the Company, the same shall be undertaken on a "work for hire" basis by the Service Provider and the Intellectual Property Rights with respect to the same shall always vest with the Company.

10.3 The Intellectual Property Rights to all the individual items of work created by Service Provider in relation to any and all of the Services of the Company vest with and shall remain the property of Company and the Service Provider shall have no right over the intellectual property rights.

10.4 In the event that Company wishes to terminate the Services midway or at any stage prior to the completion of the Services and take the design forward themselves, Service Provider shall hand over to Company all Intellectual Property Rights created until such date of termination of the Agreement.

10.5 Service Provider acknowledges and agrees that this Agreement does not grant to Service Provider any Intellectual Property Rights of the Company except as required under the Agreement and with the prior written consent of the Company. Service Provider will not use any trade secrets, or confidential or proprietary information owned by any third party while rendering the Service and shall not use the Intellectual Property Rights of the Company without the prior written consent of the Company.

10.6 Any direct or indirect use of the Intellectual Property Rights of the Company other than the permitted use by Service Provider shall be deemed to be infringement of Intellectual Property Rights. Company shall be entitled to obtain an injunction and/or specific performance as well as any other legal or equitable remedy necessary in order to compel compliance by Service Provider with the terms hereof.

ANNUAL PLACEMENT REPORT

A.Y:2023-2024

The Geethanjali College of Pharmacy's Training and Placement Cell is an important section. The management is very helpful in providing all of the services required to keep the Cell running. The Placement Cell had another successful year of placements and internships, with several regular and new companies visiting campus for the recruitment drive. Students are also interviewed outside of campus. Campus Recruitment & Training and Personality Development Programme are aimed at exposing college students to the company's international trends and developing their mindset. Aside from honing their reasoning and analytical abilities, they are taught soft skills and workplace ethics. Students are educated on General Aptitude, which includes quantitative analysis, organizational discussion, interview techniques, and resume writing, which gives interviewees confidence before the employer. The Cell organizes industry visits, training, and internships. We intend to invite companies from various fields in order to provide students from all courses with a variety of opportunities. The Cell operates with the clear goal of ensuring a better placement record and higher attainment for the organization's scholars.

Students are placed in various companies for the academic year 2023-24, including Annora Pharma Pvt Ltd, Alembic Pharmaceuticals, MSN Laboratories Pvt Ltd and Medplus.

Congratulations! Your application to Earth 5R's **Work-From-Home Medical Science, Pathology, Radiology, Pharmacology Volunteership** has been accepted!

PLEASE READ THE OFFER LETTER CAREFULLY

About Earth5R:

Earth5R is a Global Environmental Ecosystem.

In January 2023, we launched our citizen science app - 'Earth5R - The Environmental App'.

Earth5R app has been announced as the winner of 2023 Best Apps for Good in Google Play by Google.

Earth5R is endorsed by UNESCO as a **UNESCO Green Citizen**. It has also been selected as a case study of tech for impact in UNESCO's 2023 report - "Seeds of Change".

People from a very wide range of backgrounds have previously volunteered with Earth5R, including students from **Cambridge, NYU Stern, MIT, IIT, and IIMs**.

Perks of this volunteership:

- **Certificate of completion**
- Enhance your resume to suit the global market
- **Flexible volunteership hours**
- Get started instantly
- Earth5R is a UNESCO-supported global non-profit organisation, and the volunteership is **unpaid**. However, the Earth5R volunteership certificate is widely regarded and recognized Internationally.

Towards the end of the Volunteership we will ask you to:

1. Provide an **app/play store review** about this program.
2. A two minute self recorded video, with a **summary of your learnings and key takeaways** from this program which will become a part of our community stories video to be published on our platform.
3. Provide two referrals - one from your Educational Institution and one from the Corporate Sector.

Development and Validation of an HPLC Method for the Determination of Lobeglitazone in Bulk and in Tablet Formulation

ABSTRACT

Objectives: A straightforward, accurate, and precise reverse-phase high-performance liquid chromatography method was developed to determine the quantity of Lobeglitazone in both bulk and pharmaceutical dosage forms. **Materials and Methods:** The chromatographic separation was achieved on a Phenomenex Luna column with dimensions of 250 cm×4.6 mm×5 µm, and the mobile phase was a combination of potassium dihydrogen orthophosphate and acetonitrile in a 70:30 V/V ratio with a pH of 4.0, adjusted using orthophosphoric acid. The flow rate was set at 1.0 mL/min, and detection of the effluents occurred at 250 nm. **Results:** The retention time for Lobeglitazone was determined to be 2.157 min. The drug exhibited linearity within the concentration range of 10-60 µg/mL, the correlation coefficient was established to be 0.9996. The LOD, LOQ were found to be 0.8 µg/mL and 2.5 µg/mL. The accuracy of the method was considered satisfactory and the mean recovery percentage is found to be in the acceptable range of 99.78-101.31%. **Conclusion:** The HPLC method was successfully developed, validated as per ICH guidelines. The proposed method was simple, precise, sensitive, rapid, robust for the estimation of Lobeglitazone in both bulk and tablet dosage forms.

INTRODUCTION

Type 2 Diabetes Mellitus (T2DM) is a chronic, progressive metabolic disorder. It has long-term effects on the body, characterised by insulin resistance and β -cell dysfunction.¹ T2DM is a complex and multifactorial disease involving a number of underlying mechanisms. As a result, there are multiple approaches available to manage the condition.² There are several classes of Oral Anti-Diabetic agents (OADs) available,

at the Thiazolidinedione (TZD) class stands out because it primarily targets insulin resistance.³ The TZDs improve insulin sensitization and enhance glucose and lipid metabolism by activating the proliferator-activated receptor γ (PPAR γ).³ In type 2 diabetes, rosiglitazone and pioglitazone are the most commonly used drugs for better glycemic control by promoting insulin sensitivity. Due to cardiovascular and bladder cancer risks, their use has declined in recent years.⁴ The newly developed thiazolidinedione "lobeglitazone" (Chong Kun Dang

Pharmaceutical Corporation, Seoul, Korea) provides a safer and more effective alternative to existing TZDs.⁵ It works similarly to pioglitazone on glycemic control but requires lower doses. Furthermore, clinical studies have indicated positive results in terms of safety, addressing some of the concerns associated with other TZDs. Since July 2013, it has been used in Korea as a treatment for T2D due to its pleiotropic effects in pre-clinical and clinical studies.^{6,7} As a pharmacophore, lobeglitazone consists of a 2,4-thiazolidinedione group bound to an ethoxy-benzyl N-methylamino group (Figure 1). Its structural formula is C₂₁H₂₉N₃O₅S, and the chemical name is 5-[4-(2-[[6-(4-Methoxyphenoxy)-pyrimidin-4-yl]-methyl]-amino)-ethoxy]-benzyl]-thiazolidine-2,4-dione hydrosulphuric acid.⁸

Lobeglitazone tablets are available on the market under the brand name Lobj (Glenmark Pharmaceuticals Ltd.). Jong-Hwa Lee *et al.* developed a validated assay using liquid chromatography and tandem mass spectrometry to perform pharmacokinetic studies of Lobeglitazone in rats.⁹ Gulhane *et al.*, developed a bioanalytical method for the estimation of Lobeglitazone in human plasma.¹⁰ The literature survey indicates that other than a few bioanalytical methods, no method has been reported so far for estimating Lobeglitazone in pharmaceutical dosage forms.

A NEW METHOD WAS ESTABLISHED FOR SIMULTANEOUS ESTIMATION OF ELBASVIR AND GRAZOPREVIR BY RP-HPLC METHOD

Vanapalli Sindhu, Sumalatha Chepyala

Geethanjali college of pharmacy, Cheeryal(V), Keesara(M), Medchal(D), Hyderabad, Telangana.501301, India.

Abstract:

Objective: A simple, Accurate, precise method was developed for the simultaneous estimation of the Elbasvir and Grazoprevir in pharmaceutical dosage form

Methods: Chromatogram was run through symmetry C18, 250 x 4.6 mm, 5µm. Mobile phase containing 0.1% Ortho Phosphoric acid: Acetonitrile, (55:45, v/v) was pumped through column at a flow rate of 1 ml/min. Temperature was maintained at Ambient. Optimized wavelength for Elbasvir and Grazoprevir was 260 nm.

Results: Retention time of Elbasvir and Grazoprevir were found to be 3.848 min and 2.313 min. The % purity of Elbasvir and Grazoprevir was found to be 100.4 % and 100.2 % respectively. The system suitability parameters for Elbasvir and Grazoprevir such as theoretical plates and tailing factor were found to be 3568.30 and 4836.12. The linearity study for Elbasvir and Grazoprevir was found in concentration range of 12.5 µg-75 µg and 25 µg-150 µg and correlation coefficient (r²) was found to be 0.999 and 0.999. % mean recovery was found to be 100.19 % and 100.84 %. %RSD for repeatability was 0.75 and 0.26 %. The precision study was precise, robust and repeatable. LOD value was 0.082 and 0.35%, and LOQ value was 1.03 and 0.23 respectively.

Conclusion: The results of study showed that the proposed RP-HPLC method is a simple, accurate, precise, rugged, robust, fast and reproducible, which may be useful for the routine estimation of Elbasvir and Grazoprevir in pharmaceutical dosage form.

Observational study of incidence and clinical patterns of Mesenteric lymphadenopathy among children in RVM hospital

Abstract

Background

In this study, the objective was to estimate the incidence and observe the presenting complaints, and clinical patterns of mesenteric lymphadenopathy with and without abdominal pain in children.

Methodology

An observational study has been conducted on outpatients and inpatients of pediatrics in RVM Hospital (Laxmakkapally, Mulugu, Siddipet, Telangana). Total patients of 101 with mesenteric lymphadenopathy were recruited in the study and all of them were treated with the antibiotic drug metronidazole. The ML was diagnosed using the USG abdomen and Wong Bakers' pain scale.

Results

From the results obtained, we hereby conclude that the incidence rate of abdominal pain in ML was 100%. the incidence rate of ML in patients who were admitted with abdominal pain was 17%. the ML was diagnosed predominantly in females.

Keywords: Mesenteric lymphadenopathy, abdominal pain, incidence, reoccurrence, metronidazole.

Introduction

Recurrent Abdominal Pain (RAP) in children is defined as the presence of at least three episodes of abdominal pain severe enough to affect their activities over a period longer than three months [1,2]. Abdominal pain is the most common among chronic pains in younger children and the second most common chronic symptom after headache in older children and adolescents.

Abdominal pain is the most common among chronic pains in younger children and the second most common chronic symptom after headache in older children and adolescents [3]. The most common surgical disease in children with acute abdominal pain admitted to the emergency department is Acute Appendicitis (AA). Diagnostic discrimination between AA and Acute Mesenteric Lymphadenitis (AML) may sometimes be difficult as a result of the physical examination and laboratory studies after excluding other diagnoses such as diarrhea, urinary infection, intussusception,

and gastroenteritis [4,5]. Acute mesenteric lymphadenitis causes Right Lower Quadrant (RLQ) pain as in AA and its etiology may be due to primary (idiopathic) or secondary (infection, malignancy, etc.) reasons [6].

Although AML brings about abdominal pain, it does not cause any abnormalities in many healthy children with enlarged mesenteric lymph nodes. Wang et al. asserted in an ultrasound-guided clinical study that the mesenteric lymph nodes increase with age until 6 years and then decrease. Moreover, they supposed that AML with a short axis diameter larger than 8 mm could be related to abdominal pain [7].

Also, in another study, the short axis diameter of larger than 8 mm and even 10 mm was suggested for the definition of the pathologic mesenteric lymph node in children [8].

The consensus regarding the radiological and laboratory parameters which may be consistent with AML in the literature is still controversial.

ABSTRACT

BACKGROUND :

Hypertension also known as high blood pressure, is a hidden global menace, and it is a major risk of other heart diseases. A crucial need for any combination is evidence that it reduces BP significantly more than monotherapy with its separate components.

METHOD:

A comparative observational study of combination therapy (Telmisartan + Amlodipine vs Telmisartan + Cilnidipine) in Hypertensive patients was conducted over 6 months in tertiary care hospital, a total of 108 cases were collected and patient's medical records were assessed.

RESULTS:

The results showed a considerable reduction in blood pressure among both the selected groups. There is a considerable reduction of blood pressure in the group A patients (of about 30mmHg systolic pressure decrease and 20mmHg diastolic pressure decrease) with an exception in some patients, with the incidences of side effects of unusual heart rate, and general puffiness.

Group B showed significant results in decreasing the BP levels and also maintaining stability after consecutive months. There is progressive reduction (of about 40mmHg systolic pressure and 20mmHg diastolic pressure decrease) without any substantial side effects.

ABSTRACT **Aim:** A simple and sensitive analytical method was developed to estimate dalbavancin, anti-biotic drug in injectable formulations. **Materials and Methods:** Separation of analyte was attained on a Phenomenex Luna C₁₈ column (250 mm × 4.6 mm × 5 μm particle size) using potassium dihydrogen orthophosphate pH 3.0 adjusted with orthophosphoric acid: acetonitrile: methanol (70:20:10 % v/v/v) as mobile phase pumped at 1.0 mL/min. A UV detector was used for effluent detection at a wavelength of 288 nm. **Results:** The retention time for Dalbavancin was determined to be 3.96 minutes. The drug exhibited linearity within the concentration range of 20–100 μg/mL. The accuracy of the method was considered satisfactory and the mean recovery percentage is found to be in the acceptable range of 98.74–101.02 %. **Conclusion:** The RP-HPLC method was successfully developed, validated as per ICH guidelines. The proposed method was simple, precise, sensitive, rapid, robust for the estimation of dalbavancin in injectable formulations.

INTRODUCTION

The battle against severe Gram-positive infections has become much more difficult as a result of the advent and quick spread of antibiotic-resistant organisms, necessitating the development of novel antimicrobial drugs. These resistant pathogen infections have been associated with extended hospital admissions, increased health-care costs, discomfort, and even mortality.^[1-2]

Staphylococcus aureus causes a myriad of infections, demanding the utilization of antibiotics for treatment. A diverse range of antibiotics wage war against staphylococcal infections. These antibiotics zero in on crucial bacterial processes, such as the construction of cell walls, translation, transcription, and DNA replication. Unfortunately, the challenge of antibiotic resistance is surging, resulting in treatment setbacks that bear significant human and medical burdens.

Antibiotic resistance arises from mechanisms, including modifications, in the targets of drugs the deactivation

of drugs through enzymes increased expulsion of substances, and changes, in drug accessibility.^[3] The ease of resistance dissemination is heightened through a diverse range of mobile genetic elements.^[4,5] While resistance has been detected for nearly all antimicrobial compounds, instances of strains being resistant to all available drugs remain uncommon. Nevertheless, the persistence of resistance continues to present treatment complexities, as exemplified by vancomycin.

Despite the fact that fully vancomycin-resistant strains are uncommon, the more prevalent vancomycin-intermediately resistant strains (VISA) are associated with elevated infection severity and

Assessment of the role of clinical pharmacist in implementation of antimicrobial stewardship in a tertiary care hospital: An observational study

Abstract

Background

A clinical pharmacist plays a key role in the implementation of antimicrobial stewardship by rationalizing antimicrobial use, decreasing the risk of antimicrobial resistance, and improving patient's health-related quality of life.

Objective

To emphasize the role of clinical pharmacist in AMSP to develop and manage the optimal use of antimicrobial agents and to promote rational antimicrobial use.

To rationalize antimicrobial use, to promote evidence-based medicine, to decrease the occurrence of antimicrobial resistance

Methods

An observational study was conducted over 6 months in tertiary care hospitals, a total of 152 cases were collected from the patient and patient's medical record and was assessed.

Results: Among 152 cases, 54 were rational and 98 were irrational irrespective of departments, 48.97% were wrong drug error, 27.55% were inappropriate duration of therapy, 5.1% were drug duplication, 19.38% were multiple antimicrobials for unnecessary use, 3.06% were overdose, 3.06% were subtherapeutic dose and 10.2% were drug without indication. Gram stain 13.26%, culture report 46.93%.

Conclusion

In this observational study, we are concluding that the role of the clinical pharmacist is vital in AMSP. With the implementation of AMSP, there is an opportunity for improvements in the appropriate use of antimicrobials without negatively affecting clinical outcomes.

Keywords: clinical pharmacist, irrational, rational, antimicrobial stewardship, drug-related problems

Introduction

Clinical Pharmacy is a branch of pharmacy that deals with the practice of rational medication used thereby to promote the health outcomes of patients [1].

One of the significant scientific advances of the 20th century is the discovery of antimicrobials which are considered life-saving drugs. Various types of antimicrobials act on micro-organisms with different mechanisms, such as antibacterial or antibiotics against bacteria, antivirals against viruses, antifungals against fungi, etc. A strong Antimicrobial Stewardship Program can both optimize the treatment of infectious diseases and reduce adverse events, cost of treatment, and length of hospital stay associated with antimicrobial use[2].

There has been data stating that antimicrobial misuse is widespread in all healthcare systems. This misuse has led to the development of AMR. Since inappropriate use of antibiotics is excessive in India, there is a need to improve antimicrobial safety in hospitals which can be achieved through the implementation of good "Antimicrobial stewardship" refers to interventions designed to promote the optimal use of antibiotic agents, including drug of choice, dosing, route, and duration of administration [3]. A strong Antimicrobial Stewardship Program can both optimize the treatment of infectious diseases and reduce adverse events, cost of treatment, and length of hospital stay associated with antimicrobial use.

Appropriate antimicrobial therapy is based on hospital guidelines and culture results which

Prospective cohort study on the effectiveness of structured patient education program given to smokers in specialized centers (deaddiction centers)

Abstract

Background

Globally, smoking tobacco is a crucial cause of more than 80 lakh deaths per year and a key exposure factor for the progression of multiple diseases, including lung, liver, oral, and throat cancer, pulmonary diseases, heart diseases, and stroke. Cigarette smoking increases the disease burden and probability of death. Pakistan, India and Bangladesh are the most endangered countries, with a high proportion of consumers of nicotine and cigarettes.

Aims and Objectives

To execute a prospective cohort interventional study to perceive the outcomes of SPEP to help quit smoking in specialized centers.

Methodology

The study was fashioned to be prospective, interventional, and cohort in comparing the dependence on nicotine usage between three groups. They are Patients receiving only NRT, Patients receiving NRT along with SPE and Patients receiving only SPEP. The study will be conducted in Rehabilitation centers (Asha Hospital- Banjara Hills and rehabilitation center- Jubilee hills, Serenity foundation Kapra). Study was proposed to be conducted for a 3-months (12 weeks) duration.

Conclusion

Therefore, we conclude that the efficiency of the SPEP given to smokers is significantly influenced by their willingness to give up smoking. This program has shown positive outcomes as it accompanies the patient through all the phases of giving up smoking and tries to facilitate the process of abstinence easy and tool proof as possible. Smoking cessation is a challenging procedure but a rewarding one, and with professional help (SPEP) could be made possible.

Keywords: prospective, cohort, structured patient education program, specialized centers, nicotine replacement therapy, nicotine dependence

Introduction

Among the planet's current population today, 500 000 000 are estimated to die from the utilization of tobacco with a mean loss of ten years of life. As a consequence, five billion years of human life will be lost to a single behavior. Even a modest leap forward in developing an intervention with greater influence on populations of smokers could ward off millions of premature deaths [1, 2]. This paper describes SPEP as a tool that is likely to increase our impact on smokers to help them abstain from nicotine and its products. Therefore, the necessity for abstinence from smoking is of prime importance.

Nearly all of the body's organ damage results

from smoking, which also increases the threat of several illnesses and lowers smokers' overall health. Smoking has a number of detrimental impacts on a person's health, such as cancer, heart disease, stroke, lung illnesses, diabetes, and COPD which includes emphysema and chronic bronchitis. Smoking also escalates the threat for tuberculosis, a few eye diseases, and issues of the body's immune system, which includes rheumatoid arthritis. Smoking cessation is arguably the most powerful, cost-effective intervention available in clinical settings for the primary and secondary prevention of disease, disability and death [1-4]. The continued carnage and enormous costs, that result from global tobacco addiction make tobacco control

Observational study of ADR monitoring, safety and efficacy of clopidogrel with atorvastatin combination in cardiovascular diseases

Abstract

Background

These days commonly used drug in cardiovascular problems is clopidogrel & atorvastatin, so the primary goal is to figure out the adequacy and any ADRs related to the treatment.

Objective

To evaluate the safety and efficacy of drugs, and also identifies the ADRs of drugs & their associated problems in cardiovascular disorder patients.

Methods

An observational study was conducted in the inpatient & outpatient unit of the cardiology department of RVM institutional, Ixammakapally for 6 months. The study shows 105 patients, including males and females diagnosed with cardiovascular disorders.

Results

The review contains 105 subjects. Out of them, 91 showed Doubtful ADRs (86.7%), 11 showed Possible ADRs (10.5%), and just 3 showed Probable ADRs (2.9%) None of them showed any Definite ADRs, and furthermore founded on the HS Troponin I mean contrast esteem (988.44) the medicine is protected and compelling in the therapy of CVS Disorder.

Conclusion

According to the Naranjo ADR probability scale and HS Troponin values the medication is demonstrated to be protected and more compelling in the treatment of CVS issues.

Introduction

Cardiovascular Disease (CVD) is currently the leading cause of death worldwide [1]. Many CVD patients develop Acute Coronary Syndrome (ACS), a life threatening condition encompassing Myocardial Infarction (MI) with or without ST-Segment Elevation (STEMI/NSTEMI), or unstable angina [1]. Approximately 1.2 million ACS patients are being hospitalized in the United States every year for cardiovascular events [2]. Elevated platelet aggregation and subsequent thrombus formation play a critical role in the pathophysiology of these patients. As a consequence, safe and effective antiplatelet therapy is essential for reducing the high morbidity and mortality of this disease [3]. Clopidogrel is an important antiplatelet drug

that is widely used to prevent vessel blockage in clinical settings such as cardiovascular and cerebrovascular diseases. Dual antiplatelet therapy with clopidogrel and aspirin has become the standard treatment for acute coronary syndrome and after Percutaneous Coronary Intervention (PCI) Additionally, clopidogrel is commonly used with statins to lower the blood lipid level and with Proton Pump Inhibitors (PPIs) to counteract gastrointestinal tract disturbances such as aspirin induced bleeding.

The effects of clopidogrel on platelets vary among patients, with approximately 4% to 30% of patients being low responders or non responders and having an increased risk of ischemic events after stent implantation. The interaction between clopidogrel and other drugs may promote

ischemic events, as evidenced by emerging data that clopidogrel's effect on platelet function is altered by coadministration with statins or PPIs. Clopidogrel (Plavix), which was the second largest selling branded drug in the US in 2010 with \$8.8 billion in sales, is an irreversible P2Y₁₂ receptor antagonist indicated for reduction of atherosclerotic events in patients with ACS [4].

requires enzymatic conversion into its active metabolite by cytochrome P450 (CYP) enzymes [2]. Clinical evidence suggests that patients with the CYP2C19 activity loss, poor metabolism, may experience drug interaction. The combination of treatment plan with these drugs may lead to an increased risk of bleeding events [5].

Observational study on safety and efficacy of rivaroxaban in covid-19 and post covid-19 patients

Abstract

Background: Rivaroxaban used to treat the coagulation is prescribed for covid 19 and post covid 19 (viral pneumonia and LRTI). To study the role of rivaroxaban in subjects with covid 19 and post covid 19 and assess the role of Rivaroxaban in covid 19 and post covid 19 subjects (LRTI or Viral pneumonia). To check the D DIMER value pre and post-giving Rivaroxaban.

Methodology: A total of hundred subjects were taken between the age of eighteen to eighty years having increased d dimer in covid-19 and post covid-19 subjects. The subjects were prescribed rivaroxaban with the dose of 10 mg orally administered once a day. The d dimer is checked prior to the drug administration and after taking rivaroxaban.

Results: A rapid reduction in d-dimer values occurred from the administering the drug. It is observed statistically that the rivaroxaban prescribed is safe and effective in managing coagulation of covid19 and post covid-19 subjects.

Conclusion: This study confirms that the Rivaroxaban is desirable for subjects having coagulation during covid19 or post covid-19.

Introduction

Coronavirus Disease 2019 (COVID-19), caused by Severe Acute Respiratory Syndrome Coronavirus 2 (SARS-CoV-2), has developed into a pandemic disease and affected nearly every country in the world. There is no comprehensive and strong clinical evidence to support the efficacy of any drugs that specifically target the SARS-CoV-2 [1].

Previous research has found that coagulopathy is very common in COVID-19 patients, and includes thrombosis and coagulation abnormalities and dysfunction such as an elevated D-dimer level and prolonged Prothrombin Time (PT), respectively [2].

Autopsy histopathologic analysis has identified widespread thrombosis and microangiopathy in small vessels and capillaries of the lung, which are different from the pathologies observed in respiratory failure caused by other diseases [3-8]. Some scholars have therefore proposed Anticoagulation (AC) treatment as an integral part of systemic therapy in the early stage of COVID-19 [9].

Generally, retrospective studies have suggested that AC may decrease mortality in COVID-19 patients. However, these conclusions are not completely reliable nor applicable to all COVID-19 patients due to limitations in methodology such as no prospective control or matching cohort, large heterogeneity in anticoagulant therapy, and a lack of subgroup analysis [9-13].

Methodology

This study is an observational study and is proposed to be conducted for a duration of 6 months. Subjects includes who are visiting RVM Hospital, diagnosed with Covid 19, and are on treatment with rivaroxaban. The study will be conducted at RVM hospital. A total of 100 samples will be taken for the study from the various departments of the hospital and inclusion criteria for the sample was subjects with covid symptoms are considered and subjects with D-Dimer more than 500 will be considered. Exclusion criteria for the study includes children under the age of fifteen years are not considered, pregnant and lactating women are not considered. Data was collected through the
